

The best there is...

Structofoam - quality unmatched

Professional cleaning equipment is not treated with respect, it must be designed to work well, long and hard, day or night, and still come back for more.

We developed Structofoam over 30 years ago and have never looked back. It is an especially compounded material, it doesn't dent, scratch, crack or deteriorate but, equally, has no weight penalty so is the ideal selection in construction terms, whilst being both easy and convenient to use and move around and will still look just as good, year in year out.

Eco Filtration - works better and cleaner

The improved EcoDry performance is a result of progressive development, continuously striving to produce a better product, reduced energy requirements and optimum user convenience.

The combination of dual staged primary filters, HepaFlo high efficiency dust bags and the new AirFlo design, produce machines that are clean, easy and efficient to use and to empty, and will operate continuously for extended periods.

And so much more

Professional machines have to be so much more than bigger; they genuinely have to be better.

We have told you about Structofoam, the TwinFlo motors and the AirFlo system but there really is even more.

All machines are fitted with heavy duty plugged power cables so damaged cables, and it does happen, can be changed without the need for an electrical engineer. Single motored machines are supplied with two speed Hi and Lo operation to allow reduced sound levels where appropriate.

Accessory kit

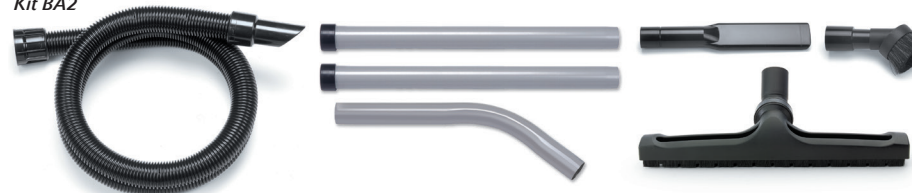

The BA2 accessory kit supplied with all 570 and 900 models has again been designed to satisfy the user who may well be expected to work long hours and cover big areas.

A full 38mm (1 1/2") NuFlex double swivel hose provides optimum flexibility and durability. The 3-piece, full bore aluminium tube set not only reduces weight during floor cleaning but equally, being aluminium, is great for overhead cleaning. Additional tube sections can be added, with little weight penalty, to reach greater heights.

The ProFlo 400 high efficiency floor brush is also light in weight to be fully complementary to the tubes, providing an excellent, highly convenient and usable combination.

In addition a crevice tool and dusting brush are supplied as standard but an extended range of specialized accessories are also available to suit specific needs or applications.

Kit BA2

EcoDry Specifications

Model	Motor	Power	Suction	Airflow	Kit	Capacity	Range	Weight	Size

EcoDry

Better Performance...
By Design

EcoDrys

Power and performance in industrial terms needs to be matched to long life, reliability and user satisfaction. One without the other does not work.

The new, improved EcoDry 570 and 900 models incorporate our new AirFlo system increasing performance by more than 30% throughout the operating range

NVQ570

NVQ900

Professional Machines for Professionals

EcoDry 570

Structof foam construction is our superb, long lasting material specification which we developed 30 years ago and it's still going strong.

The 570s are available in Simplex one motored and Duplex two motored designs and both equipped with our TwinFlo two stage industrial motors, providing unrivalled performance standards.

The new AirFlo design improves performance some 30% when used together with the HepaFlo dust bag system, providing the ideal specification for machines expected to work extended hours with little loss of performance.

EcoDry 900

The EcoDry 900s set a standard that is genuinely hard to beat, be it in construction or performance.

The secret is good design and good engineering. In practical terms it is the total optimised package – superb Structof foam construction, single or two motored power heads also in Structof foam, fitted with our industrial two stage TwinFlo motors.

Now the added AirFlo filtration upgrade enhances performance by up to 30% when used together with the HepaFlo dust bag system ensuring excellent operation for extended periods.

The whole concept of our machines, their size, power, performance and accessories is to ensure that they are both efficient and user friendly. History has told us quite clearly, that given the right equipment, you will achieve greater staff satisfaction who, in turn, will give you the right results.
